PROFILE

Mechatronics-trained 3D professional who turns 2D drawings and reference views into accurate 3D models, assemblies and drawing sets. I completed all the technical modules of Mechatronics (hydraulics, pneumatics, electrical control circuits, electronics, 3D CAD) and completed a 25-hour AutoCAD course. I bring 5+ years of professional 3D modeling, including work from engineering CAD files, and as Lead 3D Artist I built a department's production pipeline, SOPs and quality control.

TECHNICAL TRAINING & CAD

- **3D CAD module final project** (SolidWorks, 2016): modeled a sheet-metal electrical enclosure (housing, door, mounting plate) in 3D from supplied 2D drawings and assembled it with supplied vendor components: EMKA hinges and lock, a Pfannenberg filter fan, 17 PG7 cable glands for cable entry, weld studs, and earthing studs with a ground wire.
- **2D drawing set from my own model:** 7 sheets with views, details, a section, tolerances, weld symbols and sheet-metal flat patterns with bend notes, plus a 24-item bill of materials.
- **Mechatronics modules** (Cenfim, 2014 – 2016): hydraulic circuit exercises and cylinder sequences in FluidSIM, a final pneumatics project, electrical control circuits in CADe SIMU, electronics (operational amplifiers) and AutoCAD exercises.
- **CAD courses:** AutoCAD course (25 hours, certificate); Inventor learned in the Mechatronics program.

EXPERIENCE

Independent Game Developer · Self-employed projects, Netherlands — 2025 – present

- Released Tricky Piles on Google Play; modeled a modular Blender environment kit for Jigsaw (Godot, Steam).

Equipment Operator (promoted from Shopper) · Picnic, Netherlands — Sep 2025 – Sep 2026

- Monitored automated warehouse equipment and resolved first-line faults in a safety-critical environment.

Freelance 3D Artist · Portugal (remote) — Mar 2023 – Jan 2025

- Modeled, textured and rendered client assets remotely; portfolio work in product visualization.

Lead 3D Artist · Ad-pulse, Aveiro, Portugal — Mar 2022 – Mar 2023

- Established the company's first 3D department and designed its production pipeline, SOPs and quality control; mentored the team and handled client change requests on schedule.
- Worked from a furniture manufacturer's engineering CAD files (STEP, IGES, SolidWorks parts): imported them into 3ds Max and retopologized and remodeled them into real-time assets for a Babylon.js product configurator.
- Used Autodesk Inventor in production: modeled a glasses frame from front, side and top reference views.

Career break · COVID-19 pandemic — Feb 2020 – Mar 2022

3D Artist · Platforme, Porto, Portugal — Feb 2019 – Feb 2020

- Main 3D artist for SWEAR London (footwear): full pipeline in Maya, ZBrush, the Substance suite and V-Ray, from modeling to rendering, to the client's precise specifications.

Freelance 3D Texture Artist · Razor Edge Games (remote) — Jan 2018 – Jan 2019

- UV mapping and texturing of game production assets in Unity, delivered to project timelines.

SKILLS

CAD	SolidWorks (2016 coursework: sheet metal, assemblies, drawings, BOM), AutoCAD (training, coursework), Inventor (Mechatronics coursework; used at Ad-pulse)
Engineering	Hydraulic and pneumatic circuits (FluidSIM), electrical control schematics (CADe SIMU), electronics
3D modeling	3ds Max, Maya, Blender, ZBrush, Substance; retopology, UV mapping, rendering
Ways of working	Production pipelines, SOPs, quality control, documentation, mentoring; Git

EDUCATION

Mechatronics
Cenfim, Portugal · 2014 – 2016 · all technical modules completed

MBO-4, Digital Multimedia
ETEO, Portugal · 2008 – 2011

LANGUAGES & INTERESTS

Portuguese: native · English: fluent

Dutch: A2, currently learning · Driver's license (B)

Chess: club player since 2025, promoted to the first team this season
